Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 06 March 2009.
2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.

DETAILED ACTION

Election/Restrictions

Applicant's election with traverse of group III in the reply filed on March 6, 2009 is acknowledged. The traversal is on the ground(s) that the article claims should not have been separated from the method. The examiner finds this argument persuasive and has considered the article claims as well which read upon the elected species of group A and subspecies 2.

Claims 3 and 5-18 are withdrawn from further consideration pursuant to 37 CFR 1.142(b), as being drawn to a nonelected invention and species, there being no allowable generic or linking claim. Applicant timely traversed the restriction (election) requirement in the reply filed on March 6, 2009.

Priority

Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 2, and 19-22 are rejected under 35 U.S.C. 102(b) as being anticipated by Maly. The reference to Maly discloses the recited apparatus for forming a plug comprising a carrier 10, two spaced apart portions 11 for sliding fit and forming a gap, a body of material with a melting point higher than the temperature within the passageway 15a where the means is provided for melting the material to fill the gap, the melting material expands as it solidifies, the obstructing means is formed as rings 14 provided in grooves in members 11, and the method of using such to plug a pipe where cooling fluid such as water can be provided through the member 10, and where inherently the thinner material in the gap between the rings and the wall would solidify faster since there is less material to retain heat.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 4 is rejected under 35 U.S.C. 103(a) as being unpatentable over Maly in view of Feldhoff. The reference to Maly discloses all of the recited structure with the exception of forming the ring as a C shaped ring. The reference to Feldhoff discloses the use of rings in grooves of sealing members, where the rings can be either solid with no breaks or can be formed as a C-shaped ring as well. It would have been obvious to one skilled in the art to modify the ring in Maly by forming such as a C shaped ring

where such is an equivalent form of a ring used in a groove of a sealing apparatus as suggested by Feldhoff where such would allow for easier insertion of the ring into the apparatus and is a known equivalent form the ring can take.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The references to Bosma, Bridges, de Rouffignac, and Eden disclosing state of the art plug structures.
